Apache Maven

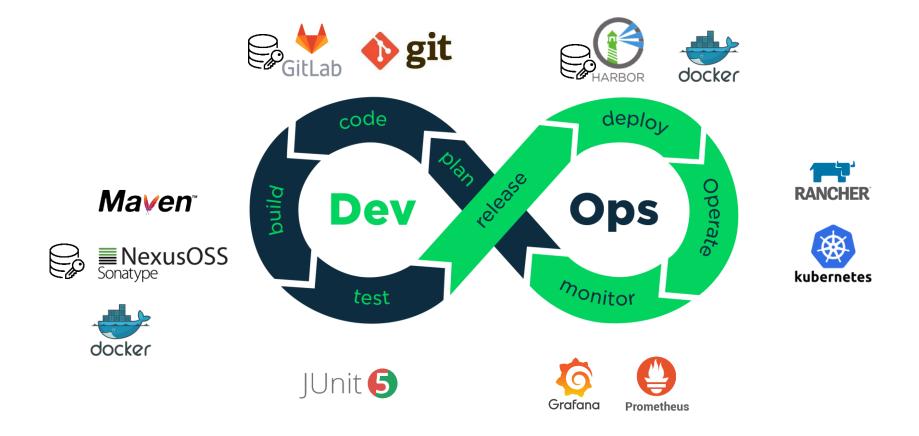

DevOps & CI/CD

DevOps Toolchain (Java Development)

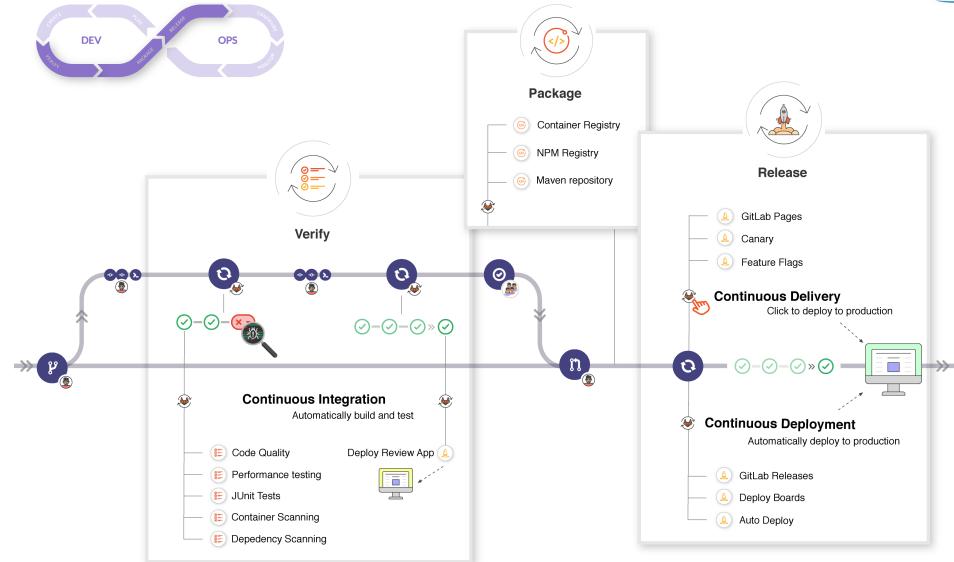

CI/CD Pipeline (Java Development)

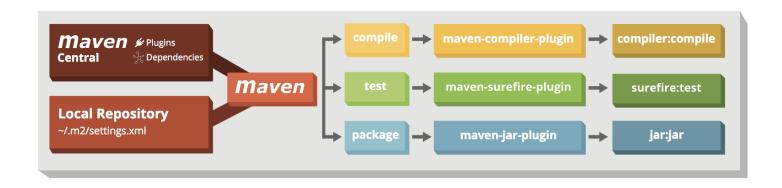

Apache Maven Introduction

Apache Maven Introduction

- Apache Maven,是一個軟體(特別是Java軟體)專案管理及自動 構建工具,由Apache軟體基金會所提供。
- 基於專案物件模型(縮寫:POM)概念所構建出來的工具

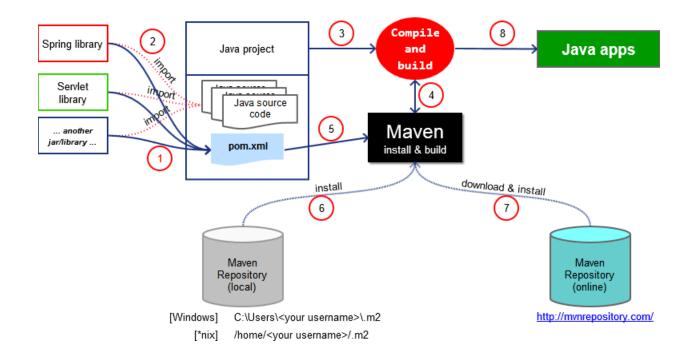

Apache Maven Introduction

 Java專案透過在pom.xml檔案中定義所需要的外部模組或函式庫, 然後maven就會從外部公開的repository或cache在本地的repository 來自動取得模組與管理相依性。

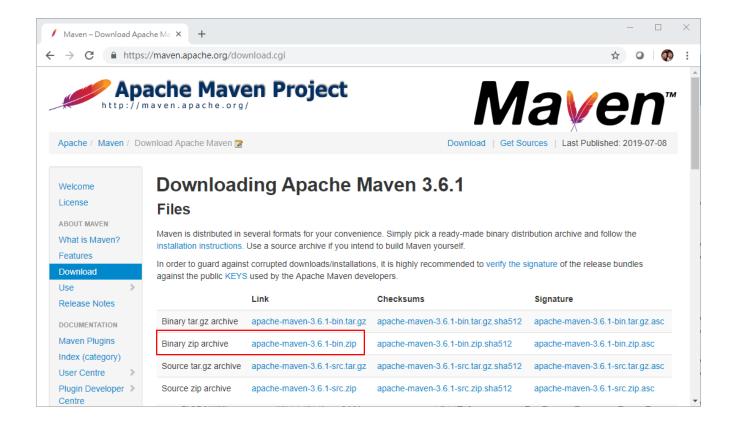

Install Apache Maven

Download Apache Maven

- 到Apache Maven的官網下載Maven 3.6.1
 - https://maven.apache.org/download.cgi

Download Apache Maven

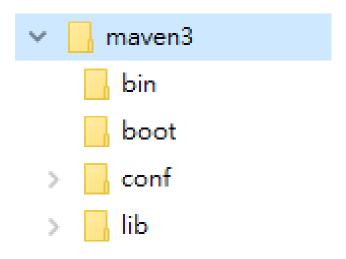

- 或從教學網頁下載Maven 3.6.1
 - https://maven.apache.org/download.cgi

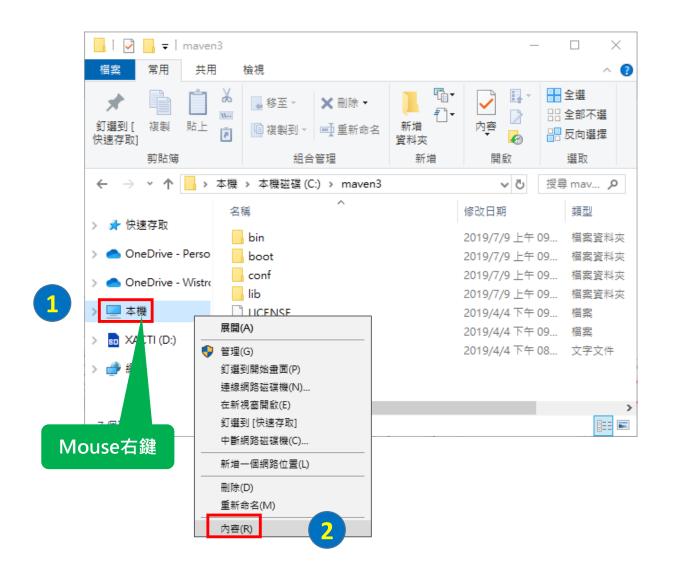

Setup Apache Maven

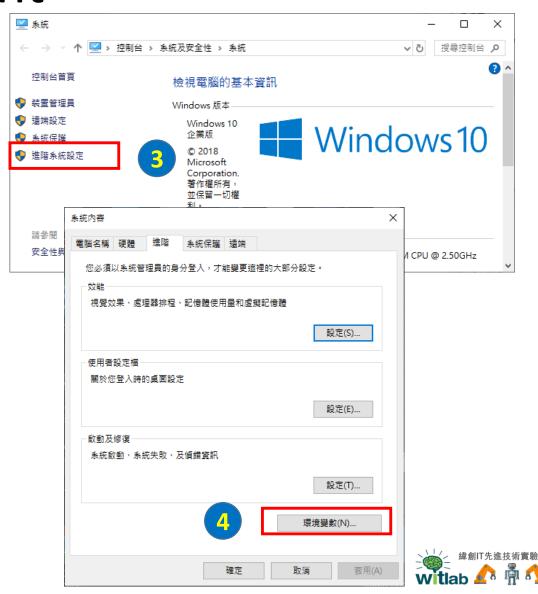

- 解壓縮並複製至c:\maven3
- 目錄結構如右圖:

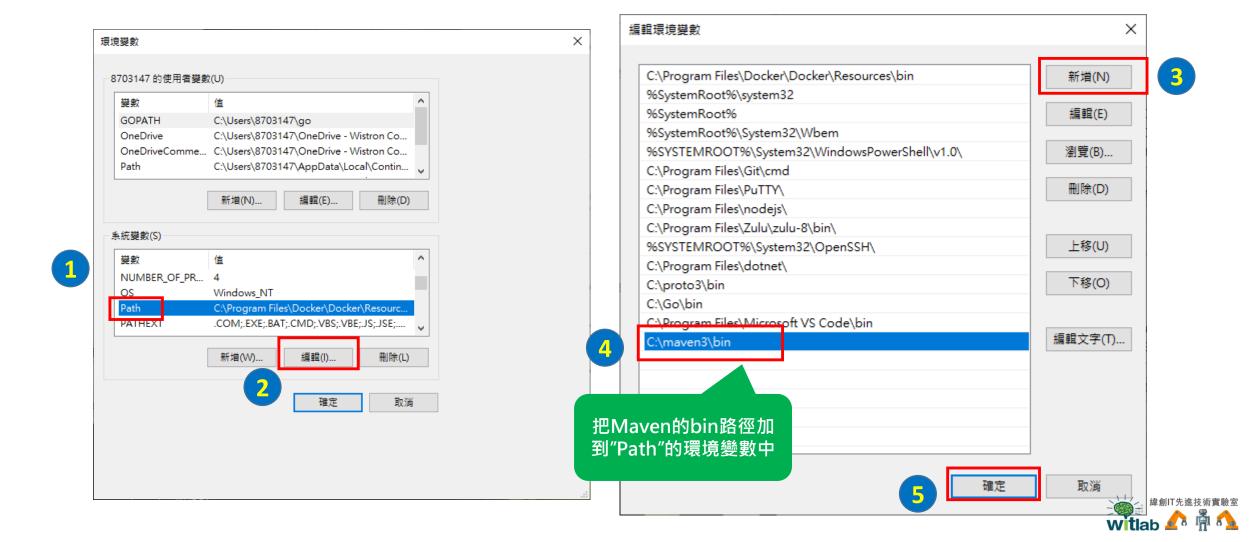

Setup System Environment

Setup System Environment

Verify Maven Setup

• 使用一個Console, 並鍵入以下的commands:

```
mvn -v
```

```
C:\\
Apache Maven 3.6.1 (d66c9c0b3152b2e69ee9bac180bb8fcc8e6af555; 2019-04-05T03:00:29+08:00)
Maven home: C:\maven3\bin\..
Java version: 1.8.0_163, vendor: Azul Systems, Inc., runtime: C:\Program Files\Zulu\zulu-8\jre
Default locale: zh_TW, platform encoding: MS950
OS name: "windows 10", version: "10.0", arch: "amd64", family: "windows"
```

要啟動Maven的前題 是要先把Java安裝完成

Configure Maven Repository

Download settings.xml

- ●到課程網頁 →個人環境設定SOP
- 下載settings.xml

Put settings.xml to .m2 folder

- 把下載的settings.xml檔案移動到以下指定目錄
 - 在Windows系統的C:// → 使用者 → {個人工號} → .m2

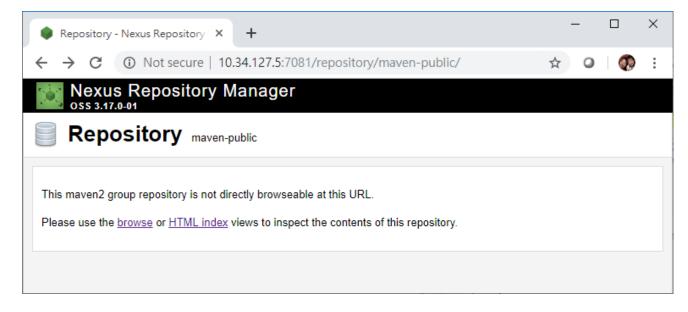

Check Private Maven Repo

- 使用Brower來連接到以下的URL:
 - http://10.34.127.5:7081/repository/maven-public/

這個MavenRepo是為了<mark>訓練</mark> 所暫時打造, 未來的PRD環境會 另外構建

```
C:\workspace\18_service_fabric\02_document\sf02\settings.xml - Notepad++
File Edit Search View Encoding Language Settings Tools Macro Run Plugins Window 2
                                        🔋 🕞 🖺 🕹 🐚 🦍 🕽 🗩 💌 🐞 🛬 🔍 🔍 🖳 🚍 🚍 🖺 🛚 🗜 🐷 💹 🗗 😁 💿 🕟 🗩 🖼 🔟 💯
                             <?xml version="1.0" encoding="UTF-8"?>
